

## Things for database everyone should do to get access 😊

1. Send your ip address in the group chat and make sure your ip has been added(including any other ip addresses that you would be accessing the server from)
2. I made a username and password for everyone to access the server:  
(everyone is an admin)

○	<b>Username</b>	<b>Password</b>
○	Elya	*****
○	Kacie	*****
○	Max	*****
○	Muiz	*****
○	Robbie	*****
○	Yifan	*****
3. Download mongodb compass: <https://www.mongodb.com/docs/compass/current/install/>
4. After downloading it will ask you for a link put in:  
mongodb+srv://<username>:<password>@cluster.rbzvfk.mongodb.net/  
  
(replace <username> and <password> with your username and password)
5. Now you have access!

## More Database stuff:

SDKs:

What do we want to use for authentication?

Authentication		
Users	User Settings	Authentication Providers
App Services provides several authentication providers that you can integrate into a client application to allow users to log in to your app. <a href="#">Learn more about how to configure authentication for any of our authentication providers.</a>		
Provider	Enabled	Edit
Allow users to log in anonymously	Off	<a href="#">EDIT</a>
Email/Password	Off	<a href="#">EDIT</a>
Facebook	Off	<a href="#">EDIT</a>
Google	Off	<a href="#">EDIT</a>
Apple	Off	<a href="#">EDIT</a>
API Keys	Off	<a href="#">EDIT</a>
Custom JWT Authentication	Off	<a href="#">EDIT</a>
Custom Function Authentication	Off	<a href="#">EDIT</a>
