

Sprint 2 Planning Meeting

Feb 28 2024

Attendees:

Kacie P, Lysa H, Yifan Z, Muiz O, Robert P, Elya D, Max Y

Goals:

- Plan and assign all tasks for sprint 2.
- Mention slight changes we are making to Jira so our organization is better and works better for what we need from Jira.

Discussion:

Structural changes made to Jira since Sprint 1:

- We've added a 'waiting' column in Jira, since some tasks will be waiting for other tasks to be done (ex. Front-end waiting on back-end), and this will give more detail than 'in progress'.
- Story point estimates have been changed to instead be a measure of priority (1 is the highest priority). It is also sorted by priority, so it is easier to see which tasks need to get done.
 - We know this is against the normal use of story points, but we were not using them otherwise, so this works better for our purposes.
- When the front end needs back end implementation, they are to create the back-end tasks and assign them to Lysa/Robbie so they know when they need to help out with something (specifically thinking about API requests).

Priorities discussed for the beginning of Sprint 2:

- Navigation bar on user profile image to implement profile/settings/sign-out page
- Implementing dailies page - one of the highest priorities right now since many things are dependent on that.
 - Back-end will need to help a lot with the dailies page, with triggers going off what a habit it recorded as done.
- Elya will be finishing the user profile, and setting up the friends feature.
- Kacie will probably spend most of her time working on the analytics page.
- Settings will be a high priority, we will chat at a later date about what we want on it for the person who begins the design (Kacie? Elya?).
