

Meeting Minutes Jan 31 2024

Attendees:

Kacie P, Lysa H, Yifan Z, Muiz O, Robert P, Elya D, Max Y

Goals:

- Vote on a general design theme and discuss current designs in Figma
- Make sure everyone can set up their database
- What has everyone been working on?
- What are people going to work on?

Notes:

- JUnit and Testing Frameworks tutorial on Friday 3:00-4:00pm, everyone should try to attend
- Make sure everyone is writing contributions they're making for sprint 1 in the Progress Report 1 document

Yifan Zhu

To: 🕒 Naser Ezzati-Jivan

Cc: 🗑️ Kacie Phillippo; 🗑️ Maxwell Young; **+4 others**

Hi Naser,

I have a question about the usage of AI tools in the project. Cause I remember that you said we are allowed to use AI code generators (such as chatgpt) because all companies are using it now. I just want to make sure that is there any constraint on it or we can do whatever we want?

Regards,
Yifan

You can use it but then you need to verify it, validate it and cite it (mention how you have used it!)

Discussion:

We went through Kacie and Elya's designs in Figma. We will be going with Kacie's general style of site, with implementations of some of Elya's ideas for challenges/leaderboards/navigation bar

- Need login/logout button
- User will need to collect xp to advance their level, should be displayed on the site
 - Points system, completion of habit gives 1 point? 10?
 - Completing challenges gives way more points
- Need landing page (Home) which is good for guest and logged in user
- Page can show trending challenges this week with different rating systems
 - Stars -> people rating the challenge (how hard it is)
 - Flames -> how difficult they are
- Add new habits needs more features (like Elya's)
 - Name
 - Description
 - Goal (hours, minutes, seconds) (# pages)
- Leaderboard
 - Highest streak and level could be displayed for all users, more specific information can be shown for friend leaderboards
- Timer will complete the task, or you can click it to complete it right away
- Analytics are a requirement, and we need to make sure we're storing data to display this effectively
- Big streak at the top of the page will be tracking how many days in a row they tracked any habit

We need to make sure that we're designing the database in a way that will be able to work with future expansion plans. Make sure we have our stretch goals in mind as we design it.

Database - everyone send in your IP addresses to Lysa so she can add it

Google integration for logging in? Would be nice!

- Lysa will look into it

What is everyone doing

Kacie will add styles and variables into Figma to make styles consistent, and will add the database file to GitHub (with passwords removed), upload the meeting minutes, and keep designing pages

Lysa will be researching MongoDB and connecting to the site, and will be making some of the tables

Yifan will work on front end now that we have designs set out

Elya will help with front end and help Kacie with page designs

Before Friday, everyone should make their own branch on GitHub, and send in suggestions for site names so we can get the theme solidified. Will vote on names on Friday and think of logo ideas.

Next Time:

Meeting - **Friday Feb 2nd at 5:00pm**

Goal - Meeting after the JUnit and Testing Frameworks tutorial from 3:00-4:00pm. Recap what that tutorial was about and things that we need to take from it. Vote on a name idea for the site and start thinking about logo/theme. Make sure everyone has their personal branches working. Take a look at Jira and see the scope of things to do for sprint 1 (deadline is February 23rd, 3 weeks away).
