

Meeting Minutes Mar 12 2024

Attendees:

Kacie P, Lysa H, Max Y, Yifan Z, Elya D, Robert P, Muiz O

Goals:

- Schedule Progress Report 2 Meeting with Brendan
 - Tuesday March 19th or Friday March 22nd, 3:00, 3:20, 3:40, or 4:00pm
- What has everyone been working on?
 - Lots of new Kacie/Elya designs to go over in Figma
- What will people be working on finishing for Friday?
- What can we strive to get done for our end of Sprint 2?

Notes:

- Sprint 2 Review Meeting is Friday (3 days away) at 3pm!!

Discussion:

Planning on signing up for Progress Report 2 Meeting for Friday at 3:00pm, but the spreadsheet is read-only, so will have to sign up at a later time.

Designs Discussion:

Notifications pop up is good

- Will need notifications table in the database to determine what is displayed and what is viewed
- Orange notification mark will disappear when it is viewed

My Stats page is good

Stats table in database will make this page load faster

Triggers in database will be required

- Check in, longest streak
- "Longest of all time" streak

Settings page is good, some small changes required

- No browser notification settings, we will not be implementing that
- Make notification settings checkboxes instead of dropdown (more options that we anticipated, see Figma)
- Style customization will only stay if we have time
 - Font size needs to be small/medium/large instead of selecting a font size
- Save changes button needed so the page knows when to reload with customization options

Friends profile pop ups are good

- No todos count, but rest is good
- Might add stats, will chat later about it

Leaderboard page is good

- Have friends pop up appear on that page when clicking the person
- Changed the font of the title

Challenges page, needs a few fixes

- Added challenge pop up so people can see who is in the challenge
- Decided to remove the “invite to challenge” feature - users will only get notification that friend created a challenge and the option to join it, might add invitations later

Dailies page functionality questions:

How will we send a request to the database that “to do” is completed?

- Send message to database immediately, on completion and deselection of checkbox
- If someone repeatedly clicks it that sucks, so we will have a delay that doesn't let the user select it unless the response from the backend has returned

Number (time, quantity) is stored in the check-ins

- Timer is stored in the front end, when the timer stops send the updated time to the database
- When counter is filled OR when checkbox is checked, increase streak by one
- Check the checkbox if the counter is filled

Guest homepage will be implemented for guests (can't be finalized until all the pages are done, since we're adding screenshots of page elements), but all other pages will just send them to the login page.

What has everyone worked on?

Muiz - working on leaderboard and challenges page, email verification

Lysa - auto testing completed for sign up and log in, template for making future ones, coverage reports, created routers and controllers for schemas

Robbie - delete habits from API page

Kacie - progress report 2, notifications design, sign in design

Yifan - working on components in dailies page

Max - edit habits pop up, create habit

Will be pushed tonight so Yifan can work on it

Elya - challenges, leaderboards, friends profile, settings designs

What will everyone work on?

Elya - finalizing designs, homepage

Lysa - want to finish API requests

Robbie - API requests

Muiz - working on leaderboard and challenges page, email verification

Yifan - dailies page, notifications, guest homepage

Max - continuing work on popups for dailies page

Kacie - sprint 2 review meeting prep, stats page, progress report 2

Next Time:

Meeting - **Friday Mar 15 at 3:00pm**

Goal - Sprint 2 Review meeting. Go through Jira, what did we get done? What didn't get done?

What is the progress of “in progress” tasks? Are we on pace to finish everything on time?

Cutting back scale for Sprint 3?
